

**INSTRUCTION TO REPLACE PCT SPECIFICATION  
WITH A SUBSTITUTE SPECIFICATION**

This is to serve as an INSTRUCTION TO REPLACE SPECIFICATION of the above captioned Patent Application according to 37 C.F.R. 1.125.

The text of the PCT specification has been rewritten to comply with MPEP 608.01(b).

Since the number and nature of the amendments to the original specification renders it difficult to consider the Application, please find attached hereto:

1. Substitute Specification - Clean Version of Description (without Claims) – 45 pages.
2. Substitute Specification - Markup Version of Description (without Claims) – 48 pages.

The Substitute Specification contains the description of drawings, including the one referred to Fig. 14, and it does not contain any references to Fig. 15 that had been canceled.

As Applicants believe, the substitute specification attached hereto includes no substantial new subject matter.
